

Customers (shippers)

NASA (anchor)

Moon Base manifests
Service-level contracts

Payload companies

Hosted payloads, demos
Spot and contract orders

International partners

ESA, JAXA, CSA elements
Export-control screening

Base operations

Regolith lots, trash,
sample return, relocations

orders, quotes, tracking, invoices

Marketplace platform (neutral operator)

Order intake

Item: mass, interface standard,
destination, priority, deadline
Planetary-protection record
Hazard class, handling needs

Registries

Published landing schedule
Vehicle capabilities, availability
Interface standards (FLEX, others)
Safety zones (Artemis Accords)

Dispatch engine

Generalised-cost sequential auction
Bundling, consolidation, team lift
Night-aware acceptance
Anticipatory staging

Operator scheduler

Console capacity by autonomy
Fan-out limits, shift plans
Latency-aware job timing

Settlement and gain sharing

Job price = variable cost + margin
Capacity commitments (contract layer)
Shapley or proportional gain split
Owner statements, audit trail

Operations data

Telemetry and item tracking
Delivery confirmation, exceptions
Replay and simulation twin
Public performance statistics

Governance

Neutrality rules, appeal path
Priority classes agreed with NASA
Safety case: NPR 8715.1, NPR 7150.2
Data rights, ITAR/EAR segregation

job offers and bids, telemetry, payments

Vehicle operators and surface assets

LTV providers

Astrolab, Lunar Outpost
Crew first, cargo in between

Heavy hauler

10 t class, night-capable
Shared asset, team-lift partner

Small rovers, robots

HL-MAPP class, offloading arms
Pad-side handling

Fixed assets

Pads, depot, charging
Landers with cranes and ramps
